

MaxSolar cooperates with SEAC Group and expands project development to over 6.5 GW

- **With a development pipeline exceeding 6.5 GW, MaxSolar is one of the largest project developers in the German market**
- **Partnership accelerates expansion of ground-mounted photovoltaic plants in Germany**
- **Cooperation paves the way for further growth and additional jobs and strengthens regional value creation**

Traunstein/Hebertsfelden, February 7, 2023. MaxSolar, a leading provider of integrated, innovative energy solutions for businesses and municipalities, today announced the integration of more than 3.1 GW photovoltaic project pipeline from SEAC Group. SEAC Group, headquartered in Hebertsfelden, Lower Bavaria, develops, constructs, and operates technically advanced solar power plants nationwide. This partnership increases MaxSolar's development volume by more than 6.5 GW and further expands the portfolio, particularly in Mecklenburg-Western Pomerania, making it one of the largest developers of photovoltaic projects in the German market. As part of the cooperation, part of the SEAC Group development team will join MaxSolar. Customers will benefit from the ideal complement of the product and service portfolios and the combined experience and expertise of both partner companies.

Christoph Strasser, CEO of MaxSolar: "We are looking forward to deepening our partnership with SEAC Group, accelerating the expansion of renewable energies in Germany. SEAC Group's impressive project pipeline is a perfect fit for our portfolio and our philosophy. With a pipeline of more than 6.5 GW and development that is carried out in-house throughout Germany, we can set new standards in the market."

Through this cooperation, both companies expand their range of services for ground-mounted photovoltaic systems, strengthening the market position, and deepening the value chain. MaxSolar will handle the execution of the entire process - from identification of suitable sites to full development, operation, and maintenance, making a valuable contribution to closing the gap in reliable, economical, and sustainable energy supply in Germany.

Abdelilah Zaafarane, CEO of SEAC Group: "MaxSolar and SEAC have a long-standing, very good, and trusting partnership. Together we can drive forward the energy transition, ensure a reliable and sustainable energy supply, and make an important contribution to the economy. Through the cooperation with MaxSolar in Mecklenburg-Western Pomerania, we, the SEAC Group, can make greater regional use of our many years of experience and our core competencies again."

MaxSolar and SEAC Group have previously worked together in project implementation as general contractors for the construction and operation of large photovoltaic projects throughout Germany. This includes one of the first subsidy-free solar projects in Germany, which is operated by the SEAC Group. With a wide range of services in the field of project development for photovoltaics and other infrastructure measures, the partnership makes MaxSolar and SEAC a strong partner for citizens and municipalities.

The cooperation strengthens the competitiveness of both companies, setting the course for further growth: Together, MaxSolar and the SEAC Group are ideally positioned to continuously expand their offerings in a rapidly growing market. Their energy solutions will enable municipalities and companies to choose a decentralized source of renewable energies and ensure local supplies of electricity and heat.

About MaxSolar

MaxSolar is a leading provider of integrated, innovative energy solutions for businesses and municipalities. Headquartered in Traunstein, Germany, the company was founded in 2009 and now has more than 170 employees at five locations throughout Germany. With its brands meineWärme, eSolution and Energy Partners, MaxSolar's offering includes the planning, construction, and operation of photovoltaic systems, energy storage systems, charging infrastructure as well as wind and heating solutions in integrated systems. The company's current project pipeline comprises over 6.5 GW at different stages of development. <https://maxsolar.de/>

About SEAC Group

SEAC Group is an integrated project developer and plant operator for photovoltaic and wind power plants. With expertise and passion, the company develops and operates ecologically high-quality energy plants. The projects of SEAC Group are characterized by sustainable added value for citizens, communities, and the environment. With Rottal Energie, the company is already working on tomorrow, to make the energy produced in the region available and affordable for the region at all times. Large-scale battery storage and charging infrastructure complete the portfolio. <https://seac-group.com/>
